04-omnisearch-card.png	marketing/x-launch/	Post 2 (alt)
05-diamond-trial-card.png	marketing/x-launch/	Posts 1d, 20
06-build-in-public-card.png	marketing/x-launch/	Post 5

Rules of thumb: post the thread first and pin it. 1–2 posts/day, best windows 8–10am and 7–9pm ET (travelers scrolling at gates). Put the link in the FIRST reply, not the post body,

except the pinned thread. Never mention data providers or competitor apps by name.

DAY 1 — PINNED LAUNCH THREAD

1a (thread opener)

Every travel app makes you choose: an AI planner that has no idea your gate just changed, or a flight tracker that can't plan dinner. We built ÜrTC so you don't have to choose. A short tour 

1b — attach urtc-omnisearch-demo.gif

Track any flight with one search box — flight number, route, airport board, airline fleet, even tail number. Live map, real statuses, gates & baggage. No date needed: "Auto" finds the current flight.

1c — attach 02-apollo-intro-card.png

This is Apollo. Golden retriever, frequent flyer, your travel companion. Ask him where your plane is, plan a weekend, build a trip budget. He fetches. It's kind of his thing.

1d — attach 05-diamond-trial-card.png

Free to use in any browser, right now: urtc-app.web.app — and every new account gets 7 days of Diamond free: alerts, AI-predicted times, unlimited Apollo, zero ads.

DAY 2 — Feature demo (urtc-omnisearch-demo.gif)

One search box. Flight number, route, airport, airline fleet, tail number — it figures out what you meant. Watch it find a live flight, gates and baggage included:

DAY 3 — Apollo voice (02-apollo-intro-card.png)

Humans at the gate: refreshing the airline app 14 times. Me: already sniffed out the new gate, mapped your walk, found coffee on the way. We are not the same. — Apollo

DAY 4 — Travel utility (03-travel-tip-card.png)

Travel tip: gate changes hit the operations feed before they hit the PA system. Track the aircraft, not the departure board — you'll be walking while everyone else is still listening.

DAY 5 — Build-in-public

(06-build-in-public-card.png)

ÜrTC is two people. A former flight attendant who lived the delays, and an engineer who got tired of them. No office, no investors, shipping every week. v1.1 is live in your browser today.

DAY 6 — Feature demo (urtc-explore-demo.gif)

Land somewhere new → open Explore. Weather, air quality, and what's actually good within a 10-minute walk of where you're standing. Filter for coffee, food, parks, museums. Zero typing.

DAY 7 — Engagement question

What's the worst flight delay story you've got? Apollo reads every reply. He cannot fix the past, but he will feel bad for you very sincerely.

DAY 8 — Positioning (01-positioning-card.png)

The AI planners have no live data. The trackers have no brain. ÜrTC has both. That's the whole pitch.

DAY 9 — Feature demo (urtc-diamond-welcome.gif)

What unlocking Diamond looks like. VIP Apollo, unlimited planning, deal alerts. Every new account gets 7 days free — no card required.

DAY 10 — Apollo voice

A dog's guide to layovers: 1) Know your next gate before you land (I handle this) 2) 40+ minutes? I'll find you real food 3) Under 40? Run. I'll keep an eye on your flight. — Apollo

DAY 11 — Travel utility

Delay math: "boarding in 20 minutes" + your inbound aircraft still 400 miles away = not boarding

in 20 minutes. Always check where the actual airplane is. ÜrTC shows you on a live map.

DAY 12 — Build-in-public

Shipped this week: [fill in 2–3 real items]. Broke this week: [1 honest item + fix]. Building in public means posting both lists. Next up: push notifications for gate changes and delays.

DAY 13 — Feature demo (screenshot the Trips budget screen on your phone)

Trip budgets shouldn't live in a spreadsheet. Set a number, log expenses in two taps, watch the meter. Apollo will gently judge your fourth airport beer.

DAY 14 — Engagement question

Window or aisle? This account is window-seat only. Apollo needs to see the clouds. Sorry to the middle-seat community, you are stronger than any of us.

DAY 15 — Travel utility

TSA line barely moving? Your real boarding time depends on the aircraft, not the airline's optimism. Check where the inbound plane actually is before you panic-sprint in socks.

DAY 16 — Apollo voice

I have watched 4,000 planes land today. Every single one was exciting. — Apollo, who takes his job extremely seriously

DAY 17 — Feature demo (screenshot a flight card share sheet)

Someone you love in the air right now? Open their flight, hit share — they get a live status link. No app download, no "text me when you land" anxiety.

DAY 18 — Build-in-public 🛠️ (run this as a poll)

Roadmap, no fluff: push alerts are next, then the App Store. What should come after? 📦
Bookings in-app / Apollo mini-games / Offline mode / Surprise us

DAY 19 — Travel utility 💡

The 6am "cheap" flight is cheap because of the 4am alarm. It's also statistically the least-delayed flight of the day. Fly early, complain early, land on time.

DAY 20 — Conversion 💡 (05-diamond-trial-card.png)

Free tier tracks your flights. Diamond predicts them — alerts, AI-predicted times, no ads. 7 days free, then \$4.99/wk, \$13.99/mo, or \$129.99/yr. Cancel anytime in two taps.

Daily Engagement Routine (10 min)

1. Search X for "flight delayed" / "gate change" + reply helpfully (no link spam — be useful, mention the app only if asked).
2. Reply to 2–3 #avgeek posts as Apollo-adjacent brand voice.
3. Like/reply to everyone who replies to you within an hour.

Bugs Spotted While Filming (fix before boosting posts)

- **Apollo AI is DOWN for guests in prod** — "couldn't reach my brain" both attempts (Gemini key/quota?). The Day 1c/10/16 posts promise Apollo works; verify before posting.
- Explore "Coffee" filter showed "Nothing within a mile" in Atlanta — likely too-strict radius or category mapping.
- Flights map shows a blue globe flash while tiles load — cosmetic, worth a loading skeleton.
- Footer on Flights screen credits the data provider — fine legally (check contract) but it's visible in demo GIFs; consider styling it subtler. Crop GIFs before posting if needed.
